

BALASUBRAMANYA SAI KUMAR

Application Security Engineer | Product Security | DevSecOps

Mobile: +91 7661087209 | Email: balu13302@gmail.com

LinkedIn: [Linkedin](#) | GitHub: [GitHub](#) | Portfolio: [Application Security Portfolio](#)

Application Security Engineer with 8+ years of software engineering and security experience across Application Security, Secure SDLC, DevSecOps and Cloud Security. Skilled in Threat Modelling, Secure Code Reviews, SAST, DAST, SCA and vulnerability management, with hands-on experience integrating security controls into CI/CD using GHAS and Wiz CI. Experienced in AWS cloud security and AI/LLM security initiatives, including controlled AI environments and AI-assisted developer tooling. Strong collaborator focused on embedding security throughout the software development lifecycle.

TECHNICAL SKILLS:

Application Security	: Secure SDLC, Secure-by-Design, Threat Modelling, Secure Code Reviews, OWASP Top 10, Vulnerability Management, Risk Assessment
Security Testing	: SAST, DAST, SCA, Secrets Scanning, Web & API Security Testing
Cloud & DevSecOps	: GitHub Actions, GHAS, Wiz CI, GitHub Checks, Security Gates, AWS, Azure, WAF, IAM
AI & LLM Security	: AI/LLM Security, Prompt Injection, Data Protection, Input/Output Validation, Access Control
Security Tools	: Wiz, Wiz Sensor, Checkmarx, Fortify, Nullify, Burp Suite, JFrog Xray, Artifactory
Languages	: C#, ASP.NET, Python, Java, JavaScript, Bash, .NET
Security Frameworks	: OWASP, MITRE ATT&CK, ISO 27001, Agile, Scrum

Key Achievements

- Implemented pre-merge security gates using Wiz and GitHub Checks, blocking high-risk PRs (CVSS >9)
- Integrated SAST, SCA, GHAS and Wiz CI into CI/CD pipelines for early vulnerability detection
- Conducted STRIDE-based threat modeling and secure design reviews to identify risks early in the SDLC
- Supported AI/LLM security for Helix AI, including controlled AI access, dev AI tooling and Wiz Sensor monitoring
- Enhanced AWS cloud security using Wiz, identifying vulnerabilities, misconfigurations and attack paths
- Collaborated with HackerOne security researchers to identify and remediate reported vulnerabilities

EXPERIENCE

DAZN SOFTWARE PRIVATE LIMITED- Hyderabad, Telangana

Application Security Engineer

June 2023 – Present

- Conducted STRIDE-based threat modelling across 50+ applications, identifying threats across authentication, authorisation, data flow, trust boundaries and external integrations and driving mitigations early in the SDLC
- Performed secure design reviews using application security checklists, API security, secrets management, logging, sensitive data handling and WAF controls
- Integrated SAST, SCA and cloud security scanning into CI/CD using GHAS and Wiz CI
- Implemented pre-merge security gates using Wiz, GitHub Checks, blocking high-risk PRs (CVSS >9) until remediation
- Performed AI-driven application security testing using Nullify, including SAST, PR security checks, vulnerability validation and exploit-based testing
- Leveraged Nullify to identify, validate and assess exploitability of application vulnerabilities, supporting automated security assessment and remediation
- Strengthened AWS cloud security using Wiz, identifying vulnerabilities, misconfigurations and attack paths
- Improved Helix AI security visibility and cloud risk detection through Wiz monitoring and Wiz Sensor deployment
- Managed vulnerabilities using a risk-based approach aligned with OWASP Top 10, severity and business impact, driving remediation with engineering teams
- Supported AI/LLM security for Helix AI, including controlled AI access, AI-assisted developer tooling, secure AI usage
- Strengthened software supply-chain security using JFrog Artifactory and Xray for SCA and vulnerability scanning
- Administered Checkmarx Dev Assist, managing onboarding and supporting secure development through Security Champion programmes
- Partnered with engg teams and HackerOne security researchers to investigate, validate and remediate vulnerabilities
- Supported ISO 27001 compliance and internal/external audits through security documentation and audit evidence

Environment: Wiz, Wiz Sensor, GHAS, GitHub Actions, GitHub Checks, AWS (WAF, IAM), Azure AD, Helix AI, AI/LLM Tooling, Java, ASP.NET, C#, Python, JavaScript, Burp Suite, Checkmarx, Checkmarx Dev Assist, JFrog Artifactory, JFrog Xray, Coralogix, Nullify, JIRA, VS Code

- Managed vulnerability remediation across 30+ applications, prioritising risks aligned with OWASP Top 10 and supporting timely closure
- Conducted secure code reviews and SAST for .NET and Java applications using Checkmarx and Fortify
- Performed application security operations including vulnerability triage, risk assessment, incident analysis, remediation and reporting
- Conducted continuous monitoring of logs, security events and vulnerability data across 40+ applications, supporting security detection and response
- Contributed to Security Champion programmes, improving secure coding awareness and developer engagement
- Supported penetration testing and security fix validation, working with application teams to address identified vulnerabilities
- Automated security and operational tasks using Python, improving efficiency of recurring activities
- Produced security reports and risk assessments for management and client stakeholders
- Collaborated with application teams to define security control requirements and drive control issues to closure

Environment: Checkmarx, Fortify, Java, Python, .NET, GitHub, JIRA, Oracle, Bug Bar, VS Code

- Performed SAST on .NET, Java and Python applications, identifying and analysing code-level vulnerabilities
- Triageed, validated and prioritised vulnerability findings, coordinating remediation with development teams
- Used Checkmarx, Fortify and Audit Workbench to verify, track and report security findings to stakeholders
- Managed vulnerabilities using ThreadFix, tracking risk, mitigation plans and remediation status
- Collaborated with development teams to drive timely remediation and align applications with secure coding standards

Environment: Checkmarx, Fortify, Audit Workbench, ThreadFix, .NET, Java, Python, SQL

- Collaborated with business analysts, developers, and stakeholders to deliver application features.
- Implemented business layer components in C#.NET by Coordinating with 3+ teams via Story-based development
- Designed and implemented 100+ C# classes and 20+ frontend modules in ASP.net.
- Created 50+ business modules and test cases for application functionality.
- Built client-side validation using JavaScript for 30+ web pages.
- Designed modules of the application in ASP.NET and engaged in writing more than 100+ C# classes
- Developed ADO.NET components for database integration with SQL Server and Oracle.
- Integrated third-party libraries such as Syncfusion and Crystal Reports for 20+ modules

Environment: ASP.NET, C#, .NET Framework 4.7/4.5, ADO.NET, JavaScript, Visual Studio, SQL Server, Oracle, Agile

EDUCATION

- **B. Tech** in ECE from **KITS** affiliated to JNTU-HYD in 2017
- **12th** from V K D V S Raju Junior College, Aswaraopeta in 2013
- **SSC** from Good News English Medium high School, Aswaraopeta in 2011

Hobbies

- Playing chess, cricket
- Reading books, Playing guitar
